

Care and cleaning of Cultured Marble Products

CARE AND CLEANING

- Our Cultured Marble products are easy to keep clean and shiny.
- We recommend a glass cleaner such as Windex, or a liquid non-abrasive cleaner and warm water. NO SOFT SCRUB, AJAX, ETC.
- A coat of a good quality automotive paste can be used every six months to keep the surface sparkling. Apply with a soft cloth or bath towel and buff to a high shine.

CULTURED MARBLE CARE AND MAINTENANCE

- Cultured marble is a man made product consisting of approximately 75% ground white marble combined with a polyester resin. The Gel Coat finish requires reasonable care to protect against marring.
- We recommend that your cultured marble be cleaned with a non-abrasive cleaner. AT NO TIME should you use any abrasive cleaner, such as Comet or Softscrub, as they will scratch or dull the surface.
- From time to time you may want to treat the surface with a protective coating. GEL-GLOSS is a product that produces a high luster, while it cleans and protects. It can be obtained from many stores. Also be sure it does not contain any abrasives.
